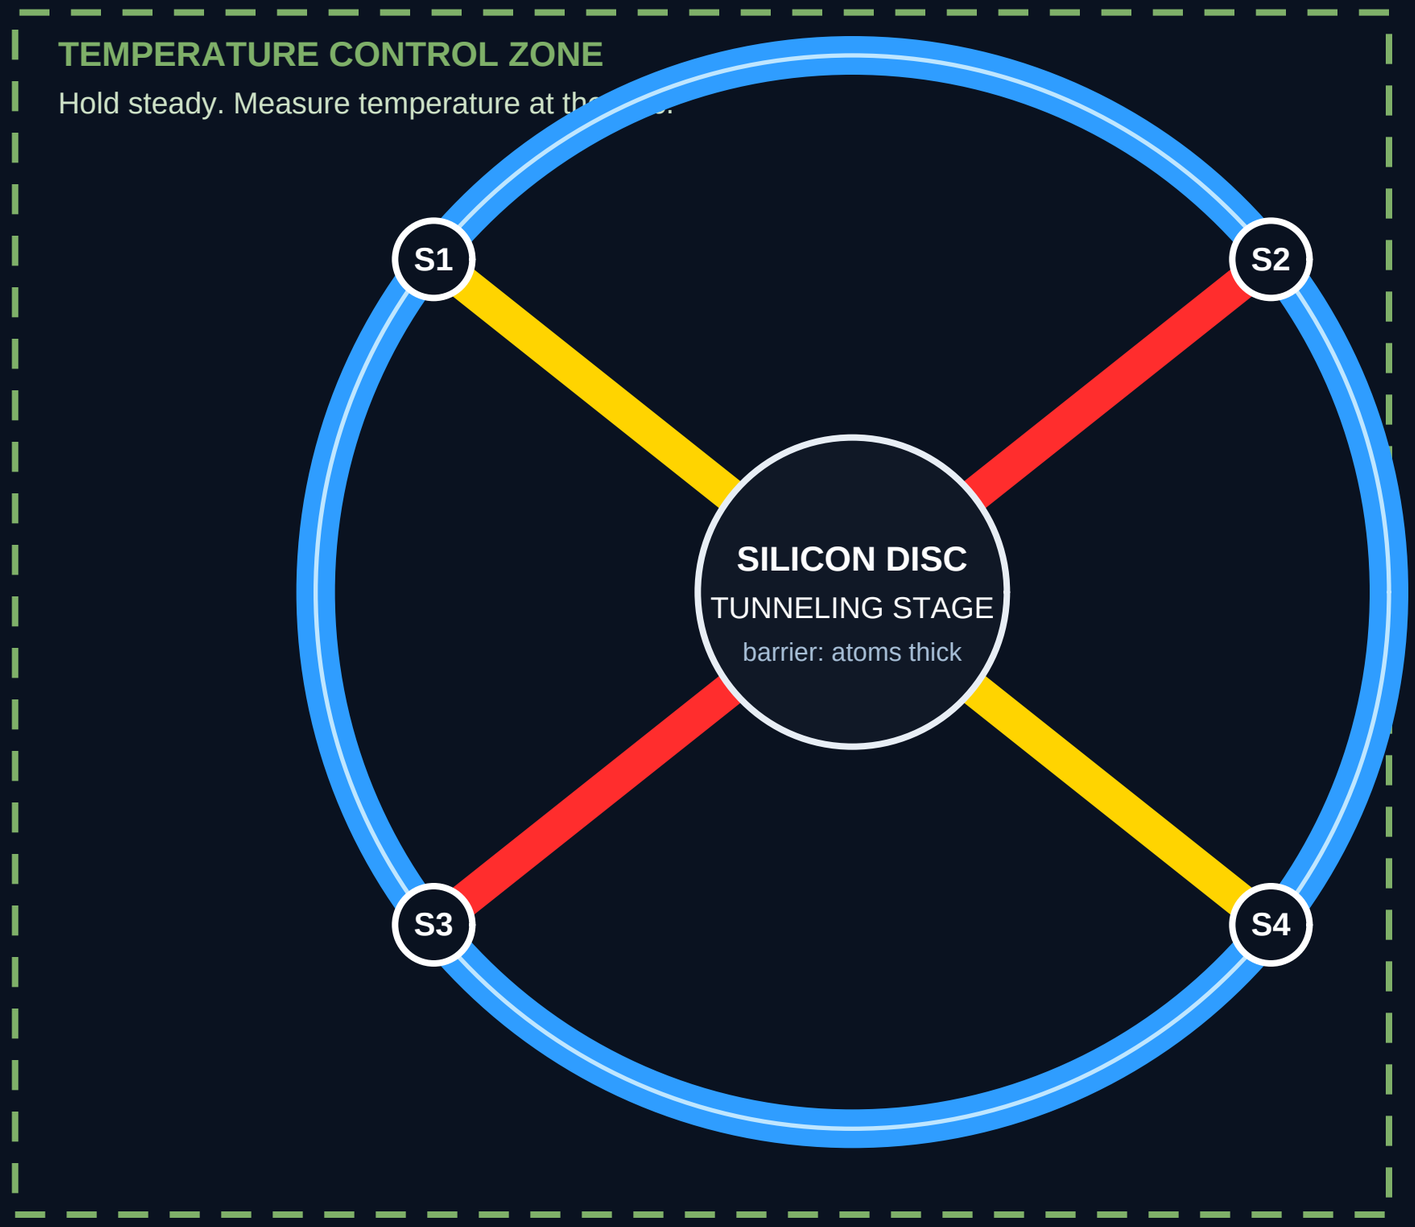
RELAYS, TUNNELS, AND TEMPERATURE

Laser relay circle + silicon disc tunneling stage + temperature control

DRAFT / GATHERED — CONCEPT ONLY



S1-S4: relay switch points — one live path at a time: blue ring, red tube, or yellow tube

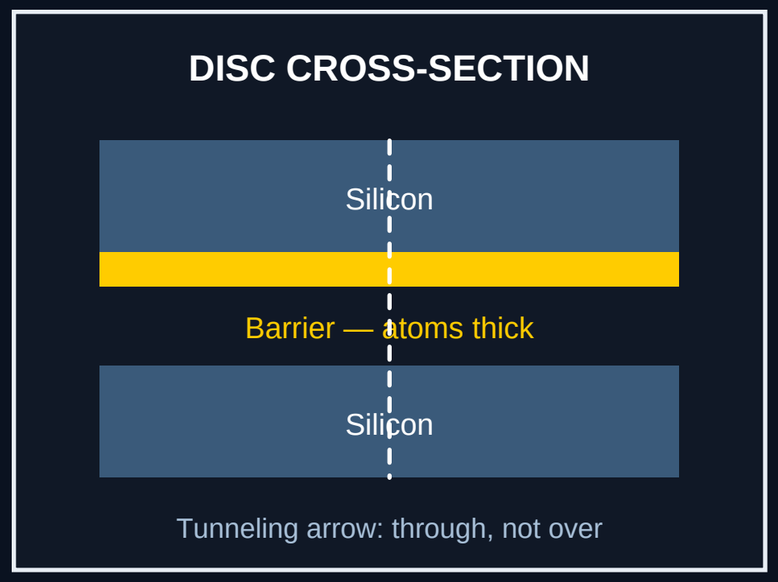
Center: red and yellow cross at the silicon disc

Blue tube — outer ring

Red tube — crossing route

Yellow tube — crossing route

Temperature control zone



TEST: THE I-V CURVE IS THE JUDGE

1. Set one relay path. 2. Record barrier.
3. Hold temperature. 4. Sweep voltage.
5. Read the curve. Repeat it, or it is not a result.

Materials background: Si, Ge, InAs/GaSb, barrier SiO_2 or HfO_2. Design unproven until built.

DRAFT / GATHERED — concept only, awaiting review and testing. Physics proven; this specific disc design unproven until built and measured.
